Mounting instructions for Loony Tunes graffiti decal

Thank you for buying this graffiti decal. Please take some time to read these instructions before you begin application.

Carefully remove all print from the decal side of the car, using fine (600 grit) sandpaper. The other side of the prototype car has no graffiti, so here you remove only the car number (or the reporting marks if you don't have a WLPX car)

Cut the decal to shape with scissors or a sharp hobby knife. Soak the decal in water for 15 seconds and wait until the decal slides easily off the paper.

For the best result, apply Microscale Micro Set to the mounting surface to help setting the decal in place. When in place, carefully dap the decal with a paper towel to soak up all the water. Apply Microscale Micro Set to the decal to make it set. When the decal is completely dry, apply a coat of Testors DullCote to protect the decal.

Repeat the process for the reporting marks on the other side. You can also mount the extra graffiti decal (not prototypical) or use it on another car.
